

“Your GIS Consulting and Mapping Connection in South Florida”

Geographic Information System (GIS) technology provides essential tools for strategic planning and decision making. GISUnlimited.Net’s experience puts your data to work for you with projects ranging in size from a single land parcel to an entire county.

With over 50 years of combined GIS experience in the fields of Government, Environmental and Education, GISUnlimited.Net will guide your organization through the GIS process including these design, implementation and support services:

**Develop Your GIS Vision, Objectives, and Requirements:**

Our multifaceted experience enables us to create a GIS vision, establish a GIS strategy and implement a GIS plan to meet your organization’s objectives and requirements.

**GIS Infrastructure Design and Implementation:** Whether your organization requires a simple GIS setup for a personal laptop or a complex multi-server GIS farm design, our in-house systems administration support services can design and implement a GIS infrastructure to fit your organization’s requirements and budget.

**Data Management, Conversion and Validation:** GIS can integrate and relate any data with a spatial component, regardless of the source of the data. However, the data conversion can be a complicated and costly process if not performed effectively. Our team of experts will work with your organization to make the implementation process seamless and reliable.

**Web-Based Application Development:** One of the most cost effective ways to disseminate, view and manage your GIS data is with a customized GIS internet application. Our in-house developers use the latest in programming languages, development environments and relational databases including: Adobe FLEX, Visual Studio ASP.NET, ArcGIS Server, ArcIMS, ArcSDE, SQL Server, Oracle and many more.

**GIS Data Analysis:** GIS technology aggregates spatial data to help your organization make informed decisions. GISUnlimited.Net’s professionals have a wide variety of GIS experience with municipal, county, and state governments as well as private commercial firms. Our specific disciplines are provided on the reverse side of this document.

## GIS Data Analysis Services

**Address Geocoding:** Our customized geocoding process can extract and match your address table based on postal address, folio number, latitude/longitude data and GPS waypoint data to create a GIS point layer. Customized automated tasks can be developed to extract and geocode at a set schedule such as daily or weekly.

**Thematic Mapping:** Thematic maps can play a very important role in presentations and strategic planning. Whether you'd like to depict foreclosure trends, population migration or crime patterns, let one of our theme-oriented maps speak for you.

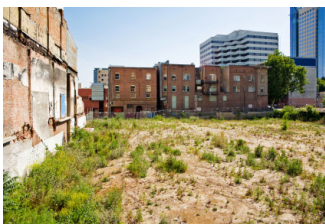

**Census Data Analysis:** Census data provides a valuable tool when planning, redistricting or applying for government-funded grants and stimulus assistance. Let us take the guesswork out of your census requirements. Some of the most common uses of census data may include:

- Sexual Predator Housing
- Economic Development
- Community Redevelopment
- Enterprise Zones
- Political Boundary Redistricting
- Grant Applications

**Property Data Management:** Most municipalities have tens of thousands of residential and commercial properties, making parcel-specific analysis cumbersome. Let our in-house staff perform your property data analysis. Common analysis includes foreclosure patterns, bank-owned property identification and other parcel-level analysis using data from your County Property Appraiser and Clerk of Courts.

**Economic Development:** When creating or expanding your existing Enterprise Zone, Urban Jobs Tax Credit Area or Community Redevelopment Agency area, let us handle the critical census and data analysis for you. Additionally, our experienced staff can present at your public outreach programs.
